

REF. 4970 1/W IP ADS iLOFT COLOUR VIDEO KIT

The most exclusive and technological Kit from FERMAX is now on the market: the INTERNET CONNECTION KIT.

If you are FERMAX, you are in IP.

Your photos, your studies, your bank, your blog, your friends, your profile, your investments, your newspaper, your games, your work, your chat, your movies, your mail, your shopping, your video, your forums, your radio, your music, your information, your travel, your auctions your books...

Look at internet. Now also to control your door.

It is the smartest Fermax kit. The most technological. The one that best adapts to your lifestyle. It is the first video door entry system that follows you wherever you go and is available anywhere you have an internet connection. Because the new Internet Connection Kit lets you

control your home from any PC connected to internet. Even though you aren't there. Although you may be thousands of miles away from home.

Kit Internet Connection. Reinventing the video door entry system.

- iLOFT, the video door entry system for the new digital home. The new iLoft is the most innovative colour video door entry monitor. It is compact, extra flat and light. Hands free operation. Able to combine an essential design with an intelligent use of new materials and finishing details that give it a simple and delicate nature.
- CITYLINE, a pure urban symbol. The Cityline video door entry panel is elegant, modern and robust. With a neat, exquisite design and new finishes. Cityline is the original and cutting-edge convex-curved profile outdoor panel for video entry systems. Synonymous with luxury and quality.
- IP module. The IP module transforms the signal from the video entry system (audio and video) to IP protocol, allowing reception on any PC in the network.

Two types of network. Two ways to control entrances.

The Internet Connection Kit uses IP technology (Internet Protocol) for its operation, so that it may be used in public networks (internet) and local networks (ethernet).

- Operation via Ethernet

In offices, the Internet Connection Kit lets you answer calls from the outdoor panel from the monitor at the entrance – the reception area – or else from up to four computers connected in the same network.

- Operation via Internet.

In addition, from any PC, it is possible to answer the call remotely, talk, open the door, check the backup camera, and even control a device in the home.

I have it at home, I can see it from here.

From anywhere in the world, you will be able to:

- See who is calling at your door.
- Talk to your visitors.
- Open the door, if you like.
- Record (still photo or moving picture) the visitor's image.
- Look through the camera of your video entry system, even though nobody has called.
- Double check with the second camera that may be installed in your home.
- Switch on equipment in your home (heating, lights, shutters...)
- Receive alarms from your home (intrusion, water leak...)
