

REF. 5700

HALO PANEL FOR VILLA

HALO is much more than a digital video door entry panel: it is the most advanced access system on the market. The most refined design and elegant lines brought together with a perfect finish and high weather resistance. Halo is a colour video door entry panel and a single block access control system with a curved, concave design which is both robust and highly resistant. It is made of anodised aluminium with a scraped and polished finish. The HALO panel is an advanced Digital Video Door Entry System which includes proximity reader access control. The proximity reader is hidden behind the display. When a proximity card is brought within range the door opens automatically. It allows up to 350 different users. Includes a colour camera with a wide angle lens, with a pan & tilt regulation system and integrated lighting. Its large LCD screen (128 x 128 pixels) combines the most sophisticated technology with the most intuitive uses due to an interface with icons, menus, graphic animation which make it extremely user friendly. The screen can become a sign or an electronic card holder to personalise the panel. It includes a thermometer and a clock, to indicate the external temperature, date and time.

TECHNICAL SPECIFICATIONS

- 128x128 pixel LCD graphic display with contrast adjuster.
- Keypads and backlit displays with high shine illumination (350 cd/m²)
- Micro processing system with watch-dog type supervision.
- Storage with non-volatile memory.
- System protected against short circuits.
- Power supply: 18 Vdc
- Operating temperature: -10 ~ + 60° - 14 ~ 140 °F (- Temperature measured in degrees Centigrade / Fahrenheit).
- High sensitivity electric microphone.
- Flat Speaker.
- Amplifier: Maximum street power: 1W. Maximum residential power: 0.15W.
- Volume can be regulated in both directions.
- Real Time Clock (RTC).

Size of product when packed: 26,5x14x7

Weight: 1,250 kg
